

# Canon PowerShot S500 AV Port Replacement

Written By: Nathan Balcom

## INTRODUCTION

This guide describes how to clean or remove a corrupt AV or USB port.

---

### TOOLS:

- [Desoldering Braid](#) (1)
  - [Phillips #0 Screwdriver](#) (1)
  - [Soldering Station](#) (1)
  - [Spudger](#) (1)
  - [Tweezers](#) (1)
-

## Step 1 — Front and Rear Casing

- Unscrew five Phillips screws using a #0 Phillips screwdriver.
- ❗ One screw is on upper right corner of the back panel.
- ❗ The other four screws are on the bottom of the camera.

## Step 2

- Open memory card cover by moving the slide switch toward the top end of of the camera.
- Remove the memory card from the slot.

### Step 3

- Remove the rear cover from the rest of the camera.
- ⓘ This may require gentle rocking of the case to free it.

### Step 4

- Unscrew the four Philips screws from the side of the casing and one screw from the bottom using a #0 Phillips screwdriver.

## Step 5

- Free the front cover from the rest of the camera.
- ⓘ The cover may require gentle rocking to remove.

## Step 6 — LCD

- Unscrew two Phillips screws above the LCD using a #0 Phillips screwdriver.

## Step 7

- Gently separate the top of LCD from the rest of the camera using your thumb.
- ⚠ Be careful not pull the LCD too far because of the ribbon cable connection.
- Place the Spudger in the hole of the electrical ribbon.
- Gently pull the ribbon down using the Spudger until it is free from the camera but still connected to the LCD.
- ⓘ The LCD will still be connected to the rest of the camera

## Step 8

- Unscrew single Phillips screw with a #0 Phillips screwdriver.
- Free the bottom panel and attached ribbon from the rest of the camera.

⚠ Be careful not to damage the ribbon.

## Step 9

- Turn over the camera.
- Lift the clear plastic from the face of the camera, peeling the adhesive just below the zoom lens.
- ⓘ The plastic will still be connected on the left side.

## Step 10

- Place the Spudger between the orange ribbon and the black ribbon gate.
- Lift the ribbon gate using the Spudger.

## Step 11

- Place the Spudger in the corner of the ribbon above the hole.
- Remove the ribbon from the ribbon gate by pulling the Spudger away from the gate.

## Step 12

- Free this ribbon and the bottom panel from the rest of the camera.

 Be careful not to damage the ribbon.

## Step 13

- Turn the camera over so you can see the LCD.
- Remove single Phillips screw below the LCD using a #0 Phillips screwdriver.

## Step 14

- Lift the blue ribbon gate using the Spudger.

## Step 15

- Insert the Spudger into the hole of the ribbon.
  - Move the Spudger away from the gate to fully remove ribbon.
- ⚠ Be careful not to damage the ribbon.

## Step 16

- Lift the LCD away from the rest of the camera.

## Step 17 — Logic Board

- Lift off the capture button by wiggling it back and forth while pulling upward.
- Be careful not to damage the two clips.

## Step 18

- Flip open the four ribbon gates using the Spudger.
- Gently pull out the ribbon cables from the gates using the Spudger.

## Step 19

- Unscrew the four Phillips screws using a #0 Phillips screwdriver.

## Step 20

- Gently lift the the logic board.

⚠ Be careful not to pull too hard and damage the white ribbon cable.

- Place the Spudger so that it is between the logic board, the white ribbon cable, and the rest of the camera.
- Remove the white ribbon cable by pulling the Spudger away from the camera, keeping it parallel to the logic board.

## Step 21

- Lay the logic board back down so that it is resting on the body of the camera.
- Pull the two plugs (white and green) out to the right from the logic board using the tweezers.

## Step 22

- i** We're now ready to begin the desoldering process. You'll need a soldering iron, solder, and desoldering wick. You should be able to find these items at a Radio Shack if you don't already have them.
- !** Please do not perform this step if you are not comfortable or have previous experience with soldering. Doing so, could cause severe damage to your camera.
- Desolder the two soldered ribbon cables attached to the logic board.

## Step 23

- Free the logic board from the rest of the camera.

## Step 24 — AV Port

- Pick up the Logic Board

## Step 25

- Blow the Particles out of the AV Port or USB Port using compressed air.
- If the pins are damaged or missing, flip over the logic board and desolder the component from the logic board.

To reassemble your device, follow these instructions in reverse order.
